TRS eMarquer:

This OSM solution developed by TRS is one of the most powerful products present in the market, under this vertical. By developing a unique pre-process to scan booklets, EMarquer ensures that the entire process can be done with zero error.

Data Check:

Total volume processed is in the range of 300,000 answer scripts each semester for all courses put together.

More than 100 evaluators simultaneously correct scripts with an average of 25-50 booklets every day.

Scanning speeds of around 3000 booklets per scanner can achieved per day under ideal conditions.

Success Stories

On screen evaluation conducted successfully at one of the largest Medical Universities in Tamil Nadu.

TRS EMarquer was implemented by a University in Tamil Nadu which has 56 Government funded and Self-financed colleges coming under its jurisdiction. Starting off as a pilot project for one single course, the University slowly has expanded the solution to all courses after noticing the positive aspects of the OSM process along with the error free digitization of

booklets enabled by our unique in house pre-process.

The process ensures complete anonymity of a student's answer script as the allotment of booklets are fully randomized through the software. The system has in built checks to prevent evaluators from skipping pages/answers and this process has also made it easier for the university to calculate the remuneration for the evaluators. One can also automatically send selected scripts for second/third evaluation if required and also providing for answer script copies to students (RTI/Revaluation requests) can be done swiftly.

"Online evaluation of booklets, not only speeds up the process, but also will help to minimize errors while correcting the scripts. When the evaluation was done manually, the university required a month to complete the process. But now the process can be completed in 10 days."   *- **Registrar of a large university***
